

Year 4

What an exciting week we have had in Year 4! Throughout the week, classes visited Lloyd Park where they learnt about local habitats. Children shook trees, swept nets across long grass, dug into soil trays and explored the William Morris garden. Children found lots of fascinating creatures and bugs which they identified using branching keys. The favourite find of the day was a newt. In addition, they dipped nets into the pond and found 10 different types of creatures and some plants. It was very smelly!

In class, children have begun investigating snails. They have made predictions about which habitat snails will prefer and set up tanks to make observations. So far, the snails like the vegetable patch best. Classes will continue to observe the snails across the week before they come to a conclusion.

Thank you to parents who supported teachers and children during our educational visit, you were all brilliant!

4B assembly

What a brilliant performance by 4B in their assembly this morning. They shared facts about what they have learnt during topic this half term. The children explained how a food chain works and performed a story about animals travelling around the world. To end their assembly, they treated the audience with a rap about dinosaurs which they wrote themselves.
